

under 2 years of age. In the current year it was again not included in the PSO announced by the Ministry of Health. The only change that PSO introduced in 2013 is the replacement of the DTP vaccine by the DTaP and addition of the 4th dose of vaccine against hepatitis B virus to children who were born prematurely. What would make implementation of vaccines in 2013 difficult, is the introduction of PCV10 vaccine as mandatory vaccination for so-called healthy preterm infants and PCV13 vaccine (the only one registered in medical risk groups) dedicated to this group of infants (for the diseases listed in paragraph a) and b) B. Mandatory Vaccination of persons at risk of infections. According to the Summary of Product Characteristics vaccination healthy preterm infants may be vaccinated with PCV13 or PCV10 (point c). Pentavalent vaccines has not appeared as mandatory for children up to 2 years of age, as well as the dTaP vaccine does not replace dT in adolescents at 14 years of age. It could reduce the number of cases of pertussis to a large extent. Given the risks of a number of influenza, its severe course and especially cases of death of risk patients, Pediatric Group of Experts on Immunization Programme calls for changes in the Immunization Programme for 2014, recommending the restoration of influenza vaccination for children from 6 months of age to 18 years of age and the introduction of compulsory vaccination in selected chronic diseases and in immunocompromised patients.
